FELLOWSHIP IN DIABETIC FOOT MANAGEMENT

ABOUT THE COURSE

The Fellowship in Diabetic Foot Management (FDFM) is designed for healthcare professionals to address the rising burden of diabetic foot complications in India. With over 100 million diabetics, poor foot care leads to severe infections, gangrene, and amputations. Nearly 85% of these amputations are preventable with early intervention and proper management. This course equips doctors with skills in early diagnosis, prevention, and advanced treatments to save amputations.

FDFM course covers five modules, focusing on diabetic foot fundamentals, disease pathophysiology, deformities, infections, surgical interventions and newer innovations in diabetic wound management. Participants will gain expertise in wound care, infection control, vascular assessments, orthotics, and rehabilitation. The course also explores AI in diabetic foot care, nutritional management, and setting up podiatry clinics. By combining theory with practical training, FDFM prepares professionals to deliver specialized care and combat the growing diabetic foot crisis.

CURRICULUM COVERS

UNDERSTANDING DIABETES MELLITUS

DIABETIC NEUROPATHY & VASCULOPATHY

DIABETIC FOOT ULCERS

CHARCOT FOOT

DEBRIDEMENTS

BELOW ANKLE AMPUTATIONS

ORTHOTICS & OFFLOADING

SURGICAL TECHNIQUES
